

IDEATION PHASE

Brainstorm & Idea Prioritization Documentation

Date	28 September 2026
Team ID	_____
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization

This documentation follows the three-step structure in the provided brainstorming template: team collaboration and problem selection, idea listing and grouping, and idea prioritization. The project ideas are focused on creating a practical ServiceNow-based metro ticketing workflow.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Area	Metro ticket booking and digital ticket management
Target Users	Metro passengers and service administrators
Core Need	Fast, accessible, automated ticket booking and digital ticket delivery
Problem Statement	Traditional metro ticket booking can involve queues, manual ticket handling, and delays in generating or accessing

Proposed ServiceNow Solution

Build a ServiceNow application in which a passenger submits a ticket request through the Service Catalog. The system captures source station, destination station, travel details and passenger information. Flow Designer processes the request, calculates the applicable fare, creates the digital ticket and triggers notifications containing the ticket and QR code. Records can be retained for status tracking and administration.

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated around the problem statement. They are grouped according to the main functional areas of the proposed ServiceNow solution.

No.	Brainstormed Idea	Purpose
1	Digital ticket request	Allow users to submit a metro ticket request through ServiceNow Service Catalog.
2	Station selection	Provide source and destination station selection with travel details.
3	Automatic fare calculation	Calculate the fare based on selected source and destination information.
4	QR ticket generation	Generate a unique QR-based digital ticket after successful booking.
5	Flow automation	Use Flow Designer to automate ticket processing, approval/validation, and generation.
6	Notifications	Send booking confirmation and ticket details through ServiceNow Notifications.
7	Booking history	Maintain a record of previous ticket requests for tracking and reference.
8	Admin monitoring	Provide administrators with a centralized view of ticket requests and status.

Idea Grouping

Group	Included Ideas
Booking & User Experience	Digital ticket request, Station selection, Booking history
Fare & Ticket Generation	Automatic fare calculation, QR ticket generation
Automation & Communication	Flow automation, Notifications
Administration	Admin monitoring

Step-3: Idea Prioritization

Ideas are considered using two dimensions from the template, Importance and Feasibility. Scores are on a 1 to 10 scale, where a higher score means greater importance or easier practical implementation.

Idea	Importance	Feasibility	Priority Area	Reason
QR ticket generation	9	8	Core	High importance and high feasibility
Automatic fare calculation	9	8	Core	High importance and high feasibility
Flow automation	9	7	Supporting	High importance and feasible within ServiceNow
Digital ticket request	8	9	Core	Core user entry point and straightforward to implement
Station selection	8	8	Core	Essential booking information
Notifications	7	9	Supporting	Useful automation with low implementation complexity
Booking history	6	8	Supporting	Useful supporting feature
Admin monitoring	6	7	Supporting	Operational support feature

Prioritization Matrix

Importance \ Feasibility	1-3 Low	4-6 Medium	7-8 High	9-10 Very High
9-10 Very High			QR ticket generation; Fare calculation; Flow automation	Digital ticket request
7-8 High			Station selection; Notifications	
4-6 Medium			Booking history; Admin monitoring	
1-3 Low				

Selected Concept for Development

The brainstorming outcome is a ServiceNow-based Metro Ticket Generating System. The concept combines Service Catalog for ticket requests, Flow Designer for workflow automation, fare calculation logic for pricing, QR-code-based digital ticket generation, and Notifications for confirmation. These functions form the main scope of the proposed system.
